More resilient volumes than expected in Q2

Why this report?

The volumes in Q2 were significantly stronger than expected, especially in air freight. In a challenging freight market (decreasing volume), Clasquin stands out for its capacity to add new clients and grow organically. We are factoring in a softer landing in the normalisation of volumes (and yields in Air freight) with a positive impact on our GP estimates in 2023 and 2024. TP raised to EUR84.

Key findings

- Clasquin continues to outperform large peers (K+N, DSV).
- Clasquin is excelling at gaining new clients and growing organically. 8% of the gross profit in H1 2023 came from new clients.
- Timar's contribution in Q2 was in line with expectations.
- We cut our GP estimates by 6% in 2023 and 9% in 2024 with respective positive impacts on EBIT of 9% and 13% respectively.
- This has a EUR8 impact on our DCF-derived valuation.

Deconstructing the forecasts

- We are looking at a 2% decrease in GP in 2023 as business conditions normalise (-8% previously).

Investment case

- Clasquin is a top-quality company that primarily bases its success on differentiated and highly attractive positioning in the freight forwarding industry. Clasquin has been implementing a well-functioning growth model with success, as evidenced by a robust 14% gross profit CAGR since 2015.
- Successful strategy execution: 1) well-led international expansion, 2) development of niche expertise and verticals (wine & spirits, art shipping, etc.) 3) smart M&A, 4) addition of value-added services for customers.
- In 2021-22, Clasquin took advantage of the powerful recovery in global demand and the massive disruption of supply chains. We expect some normalisation in 2023-24.

Catalysts

- Surge in freight rates due to high demand and tight supply chain conditions.
- Broadening of offering (logistics, supply chain, digital offer).
- Business ramp-up in fast-growing regions for trade.

Valuation methodology

- DCF (9.0% WACC, 3% terminal growth, 16% LT EBIT/GP).
- Peers (applying structural discount to account for smaller size and lower liquidity).

Risks to our rating

- Improving supply chain conditions create less favourable pricing environment.
- Freight capacity exceeding demand.
- Decreasing consumption and world trade.

Q2 beat

Air freight: strong volume driven by new clients

Volumes came up 15.3% in Q2, and were much stronger than expected (KECH: -7%). The new client wins primarily explain that beat. Clasquin strongly outperformed the air freight market. For instance, DSV released a YOY decline of -21% and K+N published a YOY decrease of -11% YOY. The yield also surprised us positively by remaining stable with the first quarter. based on the above, Q2 gross profit in Air freight amounted EUR9.6m, significantly above forecasts (KECH: EUR7.6m).

Sea freight: resilient volumes, drop in yields

Volumes were also more resilient than expected (-1% YOY reported compared to -4% expected). Clasquin is in line with K+N (also -1%) and did better than DSV (-7%). The yields also surprised us positively by remaining stable compared to the first quarter. Based on the above, Q2 gross profit in Air freight amounted EUR9.6m, significantly above forecasts (KECH: EUR7.6m).

We raise our estimates and TP (EUR84 vs. EUR76 previously)

We raise our GP estimates by 6% in 2023 and 9% in 2024 with a positive impact on EBIT of 9% and 13% respectively. In the long term, we have a central scenario, based on 3% long-term annual growth, a 16% EBIT margin in cruising speed, and normative FCF of EUR15-20m. We factor these assumptions into our DCF (9% WACC). The method yields an equity value of EUR84 (sensitivity analysis gives a value range of EUR76-92 based on varying assumptions for terminal growth and normalised profitability).

Equity research

Rating system

KEPLER CHEUVREUX equity research ratings and target prices are issued in absolute terms, not relative to any given benchmark. A rating on a stock is set after assessing the twelve months expected upside or downside of the stock derived from the analyst's fair value (target price) and in the light of the risk profile of the company. Ratings are defined as follows:

Buy: The minimum expected upside is 10% over next 12 months (the minimum required upside could be higher in light of the company's risk profile).

Hold: The expected upside is below 10% (the expected upside could be higher in light of the company's risk profile).

Reduce: There is an expected downside.

Accept offer: In the context of a total or partial take-over bid, squeeze-out or similar share purchase proposals, the offer price is considered to be fairly valuing the shares.

Reject offer: In the context of a total or partial take-over bid, squeeze-out or similar share purchase proposals, the offered price is considered to be undervaluing the shares.

Under review: An event occurred with an expected significant impact on our target price and we cannot issue a recommendation before having processed that new information and/or without a new share price reference.

Not rated: The stock is not covered.

Restricted: A recommendation, target price and/or financial forecast is not disclosed further to compliance and/or other regulatory considerations.

Due to share prices volatility, ratings and target prices may occasionally and temporarily be inconsistent with the above definition.

Valuation methodology and risks

Unless otherwise stated in this report, target prices and investment recommendations are determined based on fundamental research methodologies and relies on commonly used valuation methodologies such as Discounted Cash Flow (DCF), valuation multiples comparison with history and peers, Dividend Discount Model (DDM).

Valuation methodologies and models can be highly dependent on macroeconomic factors (such as the price of commodities, exchange rates and interest rates) as well as other external factors including taxation, regulation and geopolitical changes (such as tax policy changes, strikes or war). In addition, investors' confidence and market sentiment can affect the valuation of companies. The valuation is also based on expectations that might change rapidly and without notice, depending on developments specific to individual industries. Whichever valuation method is used there is a significant risk that the target price will not be achieved within the expected timeframe.

Unless otherwise stated, models used are proprietary. Additional information about the proprietary models used in this report is accessible on request.

KEPLER CHEUVREUX' equity research policy is to update research rating when it deems appropriate in the light of new findings, markets development and any relevant information that can impact the analyst's view and opinion.
